

TERRAIN ECOSYSTEM · WHITEPAPER

\$TRN

The Incentive Layer of the Terrain Ecosystem

Proof over Promises.

Version 3.0 · May 6, 2026

Contract: Dm7FAcF4kzVgsrn6VPEp2C5bN3tGPkydpWaR26wtDR8m

Standard: Solana Token-2022 (Token Extensions)

Operating Entity: Carolina Terrain LLC · NC License #CL.1872 · Waxhaw, NC

Real dirt. Real water. Real proof.

A licensed stormwater contractor, an on-chain incentive layer, and a six-stage operational flywheel — disclosed in the same document.

TRN Whitepaper v3.0

\$TRN — The Incentive Layer of the Terrain Ecosystem

Whitepaper · Version 3.0 · May 2026

Proof over Promises. Every claim in this document is grounded in either on-chain verifiable reality, licensed real-world operations, or explicitly labeled as exploration / directional research. Nothing is committed beyond what is currently deployed or what an operating contractor has the licensure to deliver.

Verified Contract Address: `Dm7FAcF4kzVgsrn6VPEp2C5bN3tGPkydpWaR26wtDR8m` **Standard:** Solana Token-2022 (Token Extensions) **Operating Entity:** Carolina Terrain LLC · NC License #CL.1872 · Waxhaw, NC

⚠ **Naming-collision notice:** A separate, unrelated Solana token also trades under the symbol "TRN" (Trardun). The contract address above is the only authoritative identifier for Terrain Token. Always verify by contract address before any transaction. Symbol alone is insufficient.

1. Abstract

\$TRN is the incentive layer of the Terrain Ecosystem — a vertically integrated stormwater infrastructure protocol that merges licensed contracting work with on-chain verifiability. Backed by Carolina Terrain LLC, an NC-licensed (CL.1872) drainage contractor based in Waxhaw, NC, the ecosystem operates a six-stage flywheel — **Plan, Build, Monitor, Comply, Train, Incentivize** — with \$TRN aligning rewards to verifiable physical actions and contributed terrain data.

The token is deployed as a fixed-supply Solana Token-2022 with native 15% interest-bearing yield, no mint authority, and burned liquidity. There is no presale, no VC allocation, and no ability for the operating team to mint additional supply. Value, where it exists, comes from the operational reality of the ecosystem — not from speculation about future token mechanics.

This document describes the token mechanics, the ecosystem context, current operational state, long-range research directions (explicitly non-committed), risk disclosures, and verification procedures. It is intentionally tight. The team has consistently chosen to communicate less rather than promise more.

2. Why TRN Exists

The stormwater infrastructure sector has structural problems: assets are installed and forgotten, maintenance is reactive rather than proactive, compliance documentation is fragmented across paper trails and disparate systems, and accountability gaps cost communities money and create environmental harm. These problems are not solved by software alone, and they are not solved by crypto alone. They are solved by combining licensed field work with verifiable digital records.

Terrain's thesis: **align economic incentives with the actual work.** Reward those who plan, install, monitor, document, and maintain — not those who speculate. Use the chain as a transparent, auditable layer; use the field crew as the source of ground truth. The token exists to circulate inside that loop, not as the loop's purpose.

\$TRN is not a memecoin. \$TRN is not an investment. \$TRN is the unit of account that ties this ecosystem together — a way to incentivize verified field actions, contributed terrain data, and community participation, while remaining fully transparent on-chain about what the token can and

cannot do. Anyone holding \$TRN with an expectation of profit is misunderstanding the project. Anyone holding \$TRN as an aligned participant in a stormwater infrastructure protocol that happens to use a token for incentive coordination is reading this whitepaper correctly.

3. Token Mechanics — Fully Verifiable

3.1 Token Identity

Field	Value
Name	Terrain Token
Symbol	\$TRN
Blockchain	Solana
Standard	Token-2022 (Token Extensions)
Contract Address	<code>Dm7FAcF4kzVgsrn6VPEp2C5bN3tGPkydpWaR26wtDR8m</code>
Total Supply	1,250,000,000 (fixed)
Mint Authority	Revoked (no future minting possible)
Liquidity Pool	Burned (LP cannot be withdrawn)
Metadata	Locked
Founder Allocation	Time-locked
Yield Mechanism	15% annual via Token-2022 interest-bearing extension

Verification: solscan.io/token/Dm7FAcF4kzVgsrn6VPEp2C5bN3tGPkydpWaR26wtDR8m

3.2 Why Fixed Supply

There will never be more than 1,250,000,000 \$TRN. The mint authority was revoked at deployment, which means no entity — not the founders, not the community, not future smart contracts — can ever mint additional tokens. This eliminates inflation risk by design and removes the most common vector by which token values are diluted in early-stage projects.

3.3 How the 15% Yield Works

The yield is implemented via the Token-2022 **interest-bearing extension** — a native on-chain mechanism, not a staking contract, not an emissions schedule, not a reward pool. Yield accrues to all token accounts at the same rate, automatically, without any user action.

This matters because:

- **No dilution to non-stakers.** Yield is paid in updated token amounts on the same supply, not minted from a separate pool.
- **No unlock cliff or vesting wall.** Yield accrues continuously.
- **No claim transactions.** Yield is reflected in account balances natively.
- **No staking contract risk.** There is no third-party contract holding tokens hostage; yield is a property of the mint itself.

This is the lowest-friction yield mechanism available on Solana, and it is fully verifiable on Solscan.

3.4 What "LP Burned" Means in Practice

The liquidity provider tokens — which represent ownership of the TRN/SOL liquidity pool — were destroyed at deployment. This means:

- **The protocol cannot rug-pull the liquidity.** No one holds the keys to the LP, including the founders.
- **Liquidity is permanent.** The pool cannot be withdrawn, only traded into.
- **Verifiable on-chain.** The LP wallet address is publicly known and the burn transaction is permanent.

This is one of several deliberate steps to remove discretion from the operating team. The fewer levers the team controls, the fewer ways the project can deviate from the on-chain reality stated in this document.

3.5 Founder Allocation: Time-Locked

The founder allocation is held in a time-locked account. This is verifiable on-chain. The lock prevents any concentrated team selling pressure during the window when such selling would be most damaging to community participants.

3.6 The Naming Collision — Read This Carefully

A separate, unrelated Solana token also trades under the symbol "TRN" (Trardun). **This is not the Terrain Token.** Anyone purchasing or transferring tokens believing they are participating in the Terrain Ecosystem must verify the contract address `Dm7FAcF4kzVgsrn6VPEp2C5bN3tGPkydpWaR26wtDR8m`. The symbol alone is insufficient. Always verify by contract address.

Carolina Terrain LLC is not responsible for losses caused by transactions involving incorrect contract addresses, regardless of the symbol displayed.

4. The Terrain Ecosystem Flywheel

\$TRN sits inside a six-stage operational loop. Each stage is a real component with a real status. Stages are listed with their current operational reality, not their aspirational reach.

Plan — TerrainVision AI

AI-powered site analysis. Takes drone imagery or photos, returns evidence-ready scope packages including identified drainage problem areas, recommended interventions, and asset measurements where extractable from imagery. Built by Carolina Terrain to scope sites faster and more consistently — modeled on real installs in NC clay soils, not abstract data.

Status: Live. **Site:** terrainvision-ai.com

Build — Carolina Terrain LLC

The licensed (NC #CL.1872) drainage and stormwater contractor. Real installs in NC clay soils — French drains, catch basins, retention ponds, swales, grading, hardscaping, landscape lighting, pressure washing, and the Carolina VIP Premier maintenance package. NDS-certified for drainage. Keystone-authorized for retaining walls. Twenty-mile service radius from Waxhaw covering Marvin, Weddington, Mineral Springs, Indian Trail, Matthews, Ballantyne, South Charlotte, Pineville, and Fort Mill (SC).

This is the "ground truth" leg of the flywheel. The contracting business operates whether or not the token does.

Status: Live. **Site:** www.carolinaterrain.com

Monitor — Terrain Guard

Immutable asset logging on the Internet Computer Protocol (ICP). Inspection records, maintenance history, and asset state are stored on tamper-evident infrastructure. Once recorded, an asset's history cannot be altered by the operating team, future contractors, or anyone else. When a regulator, board, or auditor asks for proof, the proof is verifiable.

Status: In development. Core functionality operational for internal use and select pilot clients; public-access hardening in progress.

Comply — Stormwater SCM

Automated regulatory reporting and compliance documentation for HOAs, property managers, and municipalities. SCM (Stormwater Control Measure) inspection scheduling, deficiency reports, audit packets. Property Memory Defense framing for boards under MS4 obligations and NCDEQ permit conditions.

Status: Live. **Site:** stormwaterscm.com

Train — Drainage Academy

Standardized training and certification for drainage and stormwater work. Course modules in production covering installation guides (French drain installation, catch basin sizing), compliance basics (SCM types, NCDEQ standards), and field certification pathways for operators.

Status: In progress. Content production phase. Several course modules in draft with subject matter expert review underway.

Incentivize — \$TRN

The economic layer. Rewards verified field actions and contributed terrain data, reduces friction for premium feature access (e.g., advanced TerrainVision reports), and provides a transparent unit of account for community participation. The token does not gate essential compliance functionality — no licensed work is held behind a token paywall.

Status: Live. This document.

Why the Order Matters

The flywheel is closed-loop: physical work feeds verifiable data; verifiable data feeds compliance documentation; compliance documentation feeds operator credibility; operator credibility feeds new work; new work earns and circulates rewards. The ecosystem is intentionally building from physical reality outward, not from speculation inward.

5. What's Live Today

A snapshot of operational state as of the date stamped on this document. For real-time status, see the "What's Live Today" section on terraintoken.com — the source of which is updated independently of whitepaper revisions.

- Token deployed on Solana Token-2022. Contract verified, mint revoked, LP burned.
- 15% annual interest-bearing yield active.
- Carolina Terrain LLC operating as licensed contractor (NC #CL.1872).
- TerrainVision AI live for site analysis.
- Stormwater SCM live for compliance documentation.
- Terrain Guard (ICP-based asset registry) — in development.
- Drainage Academy — content production phase.
- Terrain Nexus API — unifying backend layer, scaffolded.

The team has consistently chosen to ship verifiable functionality before publishing it as live. Items marked are in active development; items marked are operational and verifiable today.

6. Token Utility & Burn Mechanics

6.1 What \$TRN Can Be Used For

Within the Terrain Ecosystem, \$TRN supports several utility paths. None is gated behind speculation; each follows from real ecosystem use.

- **Premium feature access.** Certain advanced or value-added ecosystem features may be unlocked using \$TRN. For example, a basic TerrainVision analysis is available without token use; a more detailed AI-generated scope package may use \$TRN for access. Essential compliance functions are never paywalled by the token.
- **Verified action rewards.** Contributors who supply verifiable terrain data or complete verifiable field actions may receive \$TRN as a coordination reward, structured to encourage real participation rather than speculation.
- **Community participation signaling.** Holding and using \$TRN can serve as a soft signal of ecosystem participation, subject to all the disclaimers in Section 8.

6.2 Automated Burn on Usage

A small amount of \$TRN is automatically burned when certain ecosystem tools are used (for example, when an advanced TerrainVision analysis is processed). This couples token scarcity to real ecosystem usage rather than to market speculation. The burn rates are kept minimal so they do not create friction for users; the goal is alignment, not extraction.

6.3 What \$TRN Is Not

\$TRN is not a security. \$TRN is not a profit-sharing instrument. \$TRN does not entitle its holder to dividends, equity, governance over Carolina Terrain LLC, or any other rights beyond those native to a Solana Token-2022 account. Holding \$TRN is not an investment in Carolina Terrain LLC.

7. Directional Research, Not Commitment

The directions below describe research and exploration paths the team has identified as potentially valuable to the Terrain Ecosystem. **They are not committed milestones, not promises of delivery, and not guarantees of timeline or feasibility.** Decisions about which directions to pursue — if any — will be made based on community input, operator capacity, regulatory environment, and on-chain reality at the time. Treat all forward-looking content in this section as exploration, not obligation.

7.1 Long-Range Research Direction (2027+)

Deeper integration between Terrain Guard's immutable asset registry and external systems used by municipalities and large property managers — specifically GIS platforms, work-order systems, and MS4 permit reporting workflows. Goal: reduce the friction of submitting verifiable maintenance evidence to regulators.

This is gated by regulator engagement, partner municipalities being willing to integrate, and the development of stable export formats. None of these are committed.

7.2 Long-Range Research Direction (2028+)

Exploration of how Terrain's verifiable maintenance record could intersect with insurance and reinsurance underwriting — particularly D&O liability for HOA boards and flood-related property insurance premiums. Communities with immutable, third-party-verifiable compliance records may eventually be candidates for premium reductions or favorable D&O policy terms.

This direction is **highly aspirational and underwriter-dependent**. It is listed only as research interest. No insurance partnerships exist. No premium reduction commitments exist or are implied.

7.3 Environmental Impact Quantification

Methodologies to quantify environmental benefits of installed stormwater infrastructure — runoff volume mitigated, pollutant reduction, groundwater recharge contribution. Potential future intersection with environmental markets if methodology becomes credible and external validation is achieved.

Heavy research lift. Currently unscoped. Listed only as a research interest.

7.4 Decentralized Field Network

Long-range exploration of how third-party contractors might use Terrain Ecosystem tools (TerrainVision, Stormwater SCM) for their own clients while contributing data and earning rewards. This would require a substantially different operational and governance structure than current state, including (but not limited to) contractor verification, quality standards, and dispute resolution mechanisms.

Not on the immediate path. Listed for completeness.

7.5 The Terrain Nexus API

A unifying backend layer that would connect the currently-siloed ecosystem applications under a shared authentication and data pipeline. Scaffolded but currently paused under cost-control posture. Will resume when operational priorities allow.

8. Risk Disclosures

8.1 Token Risk

\$TRN is not an investment. Holding \$TRN does not entitle the holder to profits, dividends, equity, or any rights other than those native to a Solana Token-2022 account. The token's market price, if any, is determined by open-market participants and is volatile. There is no guarantee of liquidity, listing, or future utility beyond what is implemented at any given time.

Do not participate with money you cannot afford to lose.

8.2 Contract Verification Responsibility

Anyone interacting with the Terrain Ecosystem at the token layer is responsible for verifying the contract address `Dm7FACF4kzVgsrn6VPEp2C5bN3tGPkydpWaR26wtDR8m` before any transaction. The naming collision with Trardun (an unrelated TRN token on Solana) means the symbol alone cannot be trusted. Carolina Terrain LLC is not responsible for losses caused by transactions to or from incorrect contract addresses.

8.3 No Guarantee of Future Development

While the team intends to continue building the ecosystem as described, no roadmap item — including those marked as "in progress" — is guaranteed to ship. Cost-control phases, regulatory developments, technical infeasibility, and community direction may delay or cancel any planned work. Anything labeled "directional research" or "long-range" should be considered exploratory and non-binding.

8.4 Operating Entity

The Terrain Ecosystem is operated by Carolina Terrain LLC, a North Carolina limited liability company (NC License #CL.1872). The operating entity is responsible for the licensed field work and the operational infrastructure of the ecosystem. **The token itself is a permissionless Solana asset and is not a security, share, or financial instrument issued by the operating entity.** Carolina Terrain LLC has not registered \$TRN as a security with any regulator and does not consider it to be one; this position has not been validated by any regulator and may be subject to challenge.

8.5 Community Communications

Only information disseminated through official channels — the official websites listed in Section 9, and verified social accounts — should be considered reliable. Third-party statements, influencers, or rumors are not endorsed by the project team and should be treated with appropriate skepticism. If a claim about \$TRN's future utility or value seems too good to be true, it almost certainly is.

8.6 No Financial Advice

This document is not financial advice. It is not a solicitation to purchase any token, security, or financial instrument. Readers should consult qualified legal, tax, and financial advisors before making any decisions related to the Terrain Ecosystem or \$TRN.

8.7 Forward-Looking Statements

Statements in this document about future plans, directions, or possibilities are forward-looking statements and are subject to risks and uncertainties. Actual outcomes may differ materially from those described. The team makes no representation that any forward-looking statement will be realized.

8.8 Token Loss Risk

Tokens held in self-custody wallets are the responsibility of the wallet holder. Lost private keys, phishing attacks, smart-contract interactions with malicious dApps, and other self-custody risks are outside the operating team's control.

9. Verification & Resources

9.1 On-Chain Verification

- **Solscan token page:** solscan.io/token/Dm7FAcF4kzVgsrn6VPEp2C5bN3tGPkydpWaR26wtDR8m
- **Solana Explorer:**
explorer.solana.com/address/Dm7FAcF4kzVgsrn6VPEp2C5bN3tGPkydpWaR26wtDR8m
- **Verify on-chain that:** mint authority is disabled, supply is 1,250,000,000, Token-2022 program is in use, interest-bearing extension is enabled.

9.2 Operating Entity Verification

- **Carolina Terrain LLC:** www.carolinaterrain.com
- **NC License:** CL.1872 (verifiable through North Carolina state contractor licensing systems)
- **Address:** 1515 Waxhaw Indian Trail Rd S, Waxhaw, NC 28173, USA
- **Phone:** (980) 280-7638
- **Email:** info@carolinaterrain.com

9.3 Ecosystem Sites

- **Token:** terraintoken.com
- **Plan stage:** terrainvision-ai.com
- **Comply stage:** stormwaterscm.com
- **Build stage:** www.carolinaterrain.com

9.4 Official Social

- **X/Twitter:** [@carolinaterrain](#)

Other community channels may be added over time. The websites above are the canonical place to verify any newly announced channel before trusting it.

10. Appendix

10.1 Document Identifier

- **Title:** \$TRN Whitepaper — The Incentive Layer of the Terrain Ecosystem
- **Version:** 3.0
- **Last Updated:** May 6, 2026
- **Founder:** Alex Purdy
- **Operating Entity:** Carolina Terrain LLC
- **License:** NC #CL.1872

10.2 Reader Verification Checklist

Before treating this document as authoritative, a reader should be able to confirm each of the following independently:

- Contract address matches `Dm7FACf4kzVgsrn6VPEp2C5bN3tGPkydpWaR26wtDR8m` on Solscan
- Total supply equals 1,250,000,000 on Solscan
- Mint authority is disabled on Solscan
- Token-2022 program is in use on Solscan
- Interest-bearing extension is enabled on the mint
- LP burn transaction is verifiable on Solana
- Carolina Terrain LLC is licensed under NC #CL.1872 (verifiable through state systems)
- At least one operational ecosystem site ([terrainvision-ai.com](#), [stormwaterscm.com](#), or [www.carolinaterrain.com](#)) resolves correctly

If any of the above checks fail, this document should not be considered authoritative.

10.3 Versioning

This is whitepaper version 3.0. Prior versions described an earlier deployment of the project under a different token contract and standard. Material changes between versions are documented in the project's public communication channels. The current contract address `Dm7FACf4kzVgsrn6VPEp2C5bN3tGPkydpWaR26wtDR8m` is the only address authoritative for the Terrain Token as of this version.

Proof over Promises.

This whitepaper is a living document. Material changes to ecosystem mechanics, operational state, or risk disclosures will be reflected in future versions. No commitment is made to the timing or content of those revisions.
